

# Terra2

Stoneware Gravity Housing

Our Terra2™ gravity filter housing is made from our own recipe of processed clay. Each piece is hand finished, and the glaze is sprayed by hand. Our glaze is lead free and made on site.

The Terra2™ holds 2 AquaCera® gravity filter elements in the upper reservoir, and the lower reservoir holds 1 gallon of filtered water ready for use. Total volume of the unit is 2 gallons.

The Terra2™ continues our philosophy of bringing gravity filters back to their pottery origins with this unique and highly attractive alternative to stainless steel units. Finished in an off-white glaze, the Terra2™ is designed for daily use at home or work, or just about anywhere.

The Terra2™ is manufactured in the USA.

The Terra2™ system holds two 7" AquaCera® filter elements, in either Slimline or Imperial size.

Filter choices:

CeraPlus™ - Ceramic shell with granular carbon core

Chemix™ - QuickDrip™ carbon block

CeraMetix® - Ceramic shell with AquaMetix® core

AquaMetix® QuickDrip™ Gravity Block

CeraMetix® AMB - Ceramic shell with AquaMetix® block core

AquaCera® elements are made in the USA and are tested to meet or exceed ANSI/NSF standards.

The Terra2™ holds two AquaCera® filter elements in the upper chamber. Shown at the left is the unit fitted with two CeraPlus™ 7" filters.

For daily use on municipally treated water sources, we recommend using either the AquaMetix® Gravity blocks or the CeraMetix® 7" filters.

All AquaCera® 7" gravity filters are compatible with this unit.

Upper reservoir holds 1 gallon of water.

The lower reservoir holds 1 gallon of filtered water ready for drinking. The lid is compatible with both the upper and lower reservoirs, so the lower reservoir can be used for water storage, if desired. The Terra2™ comes with a stainless steel spigot.

Fully assembled the Terra2™ measures 18" high with the lid in place. The diameter is 8".

Additional colors are available.

100% Handmade in the USA.
